

Product Information

Dishwasher Racks

Product Overview & Key Features

The Clenaware Dishwasher Racks are suitable for many types of cutlery, cups, mugs, plates, bowls, kitchen utensils and many other cutlery items such as chopsticks, spatulas and whisks.

The Thermoplastic design of each different style of rack makes them both durable and robust and suitable for use in any commercial dishwasher. The Cutlery Rack and Dish Rack are compartmented so that you can wash a variety of items in one cycle.

The compartmented design means they can also be taken straight from the dishwasher and put into storage units, making them a more hygienic and safer option without the need for stacking them away.

Clenaware Dishwashing rRacks are available in 500mm sizes and come in a range of styles and functions.

Cutlery Rack

The Cutlery Rack is a compartmented basket and has a Thermoplastic design, making it durable. The Rack has four generous sized compartments for your knives, forks, spoons and other utensils. The Cutlery Rack sits inside your dishwasher basket, so you are able to wash cutlery whilst washing other items of crockery such as plates and cups.

Dish Rack

Crockery needs to be loaded into specially designed baskets to keep them in place and allow hot water and chemicals to pass over them to wash them effectively. The Dish Rack is of Thermoplastic design, with special support prongs to hold plates and saucers upright, ensuring optimum cleaning while in the dishwasher. The dish rack is suitable for most commercial dishwashers that take a basket up to 500mm.

Open Dish Rack

The Open Dish Rack is of Thermoplastic design and has a flat open base, making it possible to stack plates, bowls and other dishwasher items. The open area also allows for extra utensils and cutlery or larger items such as whisks or large kitchen knives that may otherwise not fit into the Cutlery Rack.

Durable & Practical

The durable and robust design of Clenaware Racks makes them more than capable of meeting the high demand needed for use in any commercial dishwasher. Cheaper dish racks can crack under pressure and put the safety of you and your staff at risk. Clenaware Racks have an open wall system which allows for the maximum amount of water to come into contact with your tableware. These racks can be stacked on top of one another to maximise space when in storage.
